

# Ladaptor HL 3P to 2P - 3 pin to 2 pin electrical adaptor

## Litezupp 5 3/4" Headlamp Connection

### Mounting:

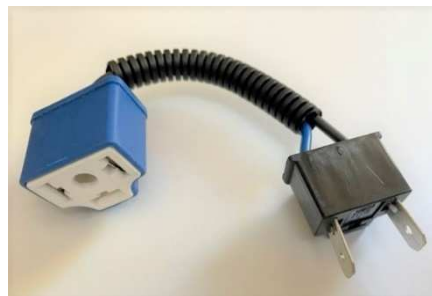

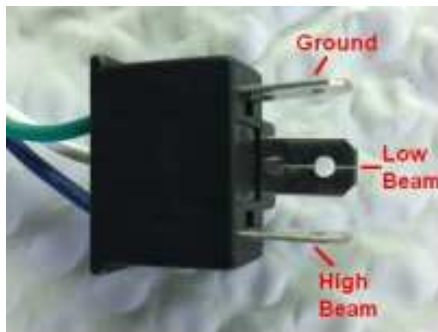

The Litezupp 5 3/4" headlamps come in a universal low beam or high beam mounting configuration. The rear mounting tabs for the low beam vs high beam globes are typically different, but these have been modified for universal fit.

### Wiring:

The LED bulbs supplied will do both Low beam and High beam so it may be a matter of rewiring depending on the lighting configuration you want.

For autos or trucks using 5 3/4" bulbs, typically the outer pair are low beam and the inner pair are high beam. The LED bulb connectors are a standard 3 pin with Ground, Low beam and High beam as shown below on the left.

We supply adaptors below right, that only enable high beam for the High beam configuration.

Depending on the low beam/high beam configuration that you want, the adaptors can be modified by using a small paper clip or other small pointed object to move pins to a different location on the socket.
